

GRITT MONARCH
OPERATING MANUAL
MODEL #: 250.100

INTRODUCTION

Welcome to the GRITT Monarch 250.100 Operating Manual. This manual will familiarize you with the use and care of your new watch.

Before we get started, we'd like to thank you again for purchasing a GRITT Monarch. You've joined a very exclusive club. You are now one of 300 people in this world to own a 250.100 GRITT Monarch.

Please remember that owning the 250.100 GRITT Monarch grants you the VIP+ status in the GRITT hierarchy. This means that you'll now have the chance to buy any future GRITT watch before anyone else. Please keep in mind, that this benefit follows the watch, so in order to claim the VIP+ status benefits in the future, you'll need to verify that you still own both the watch and the ownership card at the time of ordering.

With that out of the way, let us learn about your new watch.

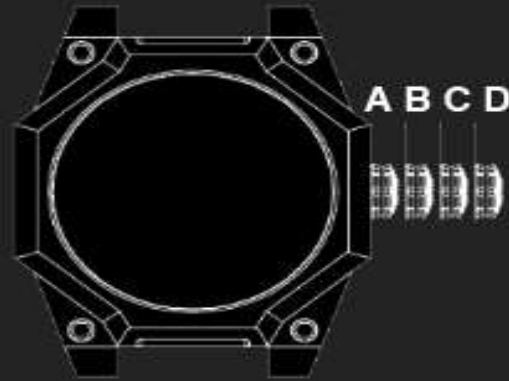

The Monarch is powered by our V10 Calibre movement. The V10 is a high beat (28,800 vibrations per hour – 4Hz) automatic 26 Jewel Swiss made movement with a 38 hour power reserve, an advanced anti-shock system, a hacking seconds hand and a quick date set functionality.

Your watch is operated using the crown on the right side of your watch. It can be used to set the time, the date and to wind your watch.

Your GRITT Monarch uses a screw down crown for improved dive rating in order to ensure the watch is fully water resistant when it's in use.

The crown is locked in position by pushing it towards the case [⇐] and screwing it clockwise [↻] until the crown is fully tight. The crown is unlocked by screwing the crown in the counter clockwise [↺] direction until it pops out of position.

OPERATING THE CROWN

The crown has 4 positions.

- A. Normal Operation (wearing position) [⌚] – this is the normal position for your watch with the crown fully screwed in to ensure water resistance.
- B. Manual Winding Position [⌚] – this is the position closest to the case and should only be used if the watch is fully stopped. The watch automatically goes to this position when the crown is fully unscrewed. You can then wind the watch by rotating the crown clockwise. In order to avoid over-winding, only wind it 20 turns and then let the automatic movement do the rest. Do not wind the watch counterclockwise as that can damage the mechanism.
Tip: You can skip this step by simply giving your watch a few shakes until the seconds hand starts moving.
- C. Quick Date Set Position [⌚] – this is the middle position of the crown (one click) and lets you jump the date wheel, one date at a time. To change the date, in the middle position, wind the crown clockwise. Do not wind the crown counter-clockwise as that can damage the mechanism.
- D. Time Set Position [⌚] – this is the furthest out position in the movement (two clicks) and lets you set the current time. Do not use a lot of force to get into this position. Once in this position, push the crown clockwise or counter clockwise until you get to the correct time.

Tip: Do not confuse noon and midnight when setting the time.

DIVING BASICS

The GRITT Monarch 250.100 has a 200 Meter Water Resistance rating.

Diving Math: 200 Meters = 660 Feet = 20 ATM

This means this watch is suitable for most water based activities. You can take a bath with it, swim with it and even do some recreational shallow diving.

Diving Tips

- GRITT recommends using a dive computer for all dives, dive computers are cheap and offer a lot more information about your dive profile than just the elapsed time. You should only be using your watch as a backup in case your dive computer runs out of power.
- Please ensure that the crown is completely screwed in before submerging the watch under water. Improperly screwed in crowns lead to damaged movements and expensive repair costs.
- Under no circumstances should you operate the crown when the watch is wet or in the water.
- If used in sea water, please make sure to rinse the watch in fresh water and dry it completely.
- Note: Water Resistance is tested under optimal conditions with brand new gaskets and a completely motionless watch. Swimming movements increase this pressure, so the actual max depth limit for your watch in the real world is going to be lower than 200 Meters.

CHANGING THE STRAP

We realize that some GRITT owners may wish to replace the stock strap that came with your watch with a different style/material. If you don't want to use the GRITT straps, simply use any 18mm strap instead or commission a strap maker to make you a custom piece with the same dimensions as your stock strap.

Changing the strap is especially easy on the GRITT Monarch thanks to the drilled lugs and our use of the bolt/nut combination instead of regular spring bars to hold the strap in place.

To change your strap, simply unscrew the bolt/nut using a 1.5MM Hex Screwdriver or a 1.5MM Allen Wrench, take the old strap off, reinstall the new strap and reverse the process.

The hex design of the screws insures that you don't have to worry about stripping the screws or scratching them like you do with flat head and Phillips head screws that are normally used.

CARING FOR YOUR WATCH

We have a few tips to help you care for your watch. After all, proper care for your GRITT Monarch can help the watch last a lifetime. There are a few small things you can do, to help you avoid preventable damage to your watch:

- Make sure the crown is always screwed-in to prevent dust, dirt or water from getting inside, but try and avoid over-tightening the crown when screwing it in.
- Wash your watch from time to time. A simple cleaning can help your watch look new. Use cold water, soap and a q-tip to get in the gaps. Make sure to clean over a towel to avoid damage if you drop the watch accidentally while cleaning. Make sure to avoid hot water and under no circumstances should you use a dishwasher or any chemicals when cleaning your watch.
- Only clean the watch crystal with a microfiber cloth
- Avoid taking a hot shower/bath while wearing your watch.
- Avoid strong magnets or similar devices.
- When taking off your watch, avoid rough surfaces. Be extra careful when taking your watch to the beach...always remember where the “sand” part from the word sandpaper comes from.
- Try and avoid storing your watch in direct sunlight, this will prevent the dial from fading and changing colors with time.
- Even though our movement is designed to handle minor shocks, try and avoid wearing your watch during high shock activities (ex: shooting high caliber weapons).
- Service your GRITT Monarch every 5 years either through GRITT or by using a local watchsmith.

Measurements

- Case Diameter: 43mm
- Case Diameter(with crown): 46.5mm
- Case Length(lug to lug): 53mm
- Case Thickness: 12mm
- Case Weight: 96 grams
- Watch Weight: 112 grams

International Warranty Information

Every GRITT watch is subjected to a stringent set of tests to ensure its precision and reliability. Our confidence in our ever-stricter quality assurance allows us to set a new standard in watchmaking: all new GRITT watches come with an international 2-year guarantee. We guarantee your watch against malfunction and manufacturing defects for a period of three years with effect from its date of purchase. For your warranty to be effective, your watch must be purchased from an authorized GRITT retailer. The following are not covered by the product or service warranty: normal wear and tear, accidents (knocks, dents, crushing, broken/scratched crystal, etc.), anomalies relating to a shock, abnormal use, incorrect handling, failure to observe the recommended water-resistant service and having work carried out on the watch by someone other than an authorized GRITT repair center.

For warranty repairs and to submit service requests please use the contact form found at: www.grittwatches.com/service/

Note: For warranty service, you'll need to be in possession of the warranty card that came with your watch.
